Description

### Impact

Users cannot trust the flight details shown on the Purchase page. The selected flight details from the Results page are not carried over, so the wrong airline, flight number, and price are displayed.

### Expected behaviour

The Purchase page should display the exact Airline, Flight Number, and Price selected on the previous page.

### Actual behaviour

The page displays static dummy data.

- Airline: United
- Flight Number: UA954
- Price: 400

This happens regardless of the flight chosen.

### Steps to reproduce

- Navigate to BlazeDemo Home Page.
- Select Paris as Departure and London as Destination.
- Click Find Flights.
- Note the details of any flight, for example, Aer Lingus, Flight 43, Price \$200.98.
- Click on Choose This Flight.
- Observe the Flight Number, Airline, and Price on the Purchase Page.

### Environment

- Windows 11
- Chrome Version 148
- TestNG Automation Environment

### Other information

- Priority: High
- Severity: High

Generated at Sat Jun 13 14:12:53 UTC 2026 by Harsh Choudhary using Jira 1001.0.0-SNAPSHOT#100291-rev:fc7e4733e5b961216b8bf0a12338994ae0045171.

Description

Impact

The purchase form accepts empty submissions and invalid data types. This allows users to submit the form without required information and with invalid credit card input.

Expected behaviour

Form submission should be blocked. Inline validation error messages should appear for mandatory and invalid fields.

Actual behaviour

The form submits successfully and generates a valid Booking ID on the Confirmation Page.

Steps to reproduce

- Navigate to the BlazeDemo Purchase Page.
- Leave all fields (Name, Address, City) completely blank.
- Enter alphabetic characters (e.g., "ABCD") in the 'Credit Card Number' field.
- Click the 'Purchase Flight' button.

Environment

- Windows 11
- Chrome Version 148

Other information

- Priority: High
- Severity: Medium

Generated at Sat Jun 13 14:17:46 UTC 2026 by Harsh Choudhary using Jira 1001.0.0-SNAPSHOT#100291-rev7c7e4733e5b961216b8b0a12338994ae0045171.

Please submit the form below to purchase the flight.

| Sprint:             | BDA Sprint 1         |           |            |
| Start date:         | 10/Jun/26            |           |            |

Description

Impact

New user registration is completely blocked.  
Users cannot create a new account because form submission fails with a 419 | Page Expired error.

Expected behaviour

The system should successfully create a new user account.  
It should generate a session and redirect the user to the authenticated dashboard or homepage with a success message.

Actual behaviour

The browser redirects to a blank page displaying a 419 | Page Expired server error.  
The user is not registered.

Steps to reproduce

- Navigate to the BlazeDemo Registration page (/register).
- Fill in valid data in all mandatory fields:
  - Name
  - Company
  - E-Mail
  - Password
  - Confirm Password
- Click on the "Register" button.

Environment

- Windows 11
- Chrome Version 148

Other information

- Root cause suspected: Missing or misconfigured CSRF token in the HTML form payload.
- Priority: Highest
- Severity: Critical

Sprint:BDA Sprint 1

Start date:06/Jun/26

Description

Impact

Existing user login is broken. Users cannot authenticate or access their account dashboard. Instead, they see a generic error page.

Expected behaviour

The system should authenticate the credentials and log the user into their account dashboard.

Actual behaviour

The authentication fails entirely, and the application throws a generic "419 | Page Expired" HTTP error on a white screen.

Steps to reproduce

- Navigate to the BlazeDemo Login page (/login).
- Enter a valid E-Mail Address and Password.
- Click on the "Login" button.

Environment

- Windows 11
- Chrome Version 148

Other information

- Priority: Highest
- Severity: Critical

Attachments:

 Screenshot 2026-06-06 144200.png

Sprint:

Start date:

10/Jun/26

Description

Impact

The "Arbitrary Fees and Taxes" on the Purchase page does not change based on the selected flight price. This makes the "Total Cost" calculation incorrect for users.

Expected behaviour

The taxes and fees should be calculated as a percentage of the base price, such as 10% or 15%.

Actual behaviour

The "Arbitrary Fees and Taxes" is statically hardcoded to **514.76** for every single flight.

Steps to reproduce

- Navigate to BlazeDemo and search for flights.
- Select a low-priced flight, for example **\$200.98**
- Observe the "Arbitrary Fees and Taxes" on the Purchase page.
- Go back and select a high-priced flight, for example **\$432.98**
- Observe the fees again.

Environment

- Windows 11
- Chrome Version 148
- TestNG Automation Environment

Other information

- Priority: Medium
- Severity: Major

Sprint:

Start date:

10/Jun/26

Description

Impact

The checkout form allows a flight purchase to succeed even when the credit card year is expired. This can let users complete transactions that should be blocked.

Expected behaviour

The form should show a validation error stating "Credit Card has expired" and block the transaction.

Actual behaviour

The system accepts the expired year and successfully generates a Flight Booking Confirmation.

Steps to reproduce

- Navigate to the BlazeDemo Purchase Page.
- Fill in all valid passenger details.
- In the "Year" field for the credit card, enter a past year (e.g., "2015" or "2020").
- Click "Purchase Flight".

Environment

- Windows 11
- Chrome Version 148

Sprint:

Start date:

10/Jun/26

Description

Impact

Users can bypass the booking flow and access the Confirmation Page directly through the URL. This allows a fake booking confirmation to appear without any flight being searched or purchased.

Expected behaviour

The application should check for an active session or booking flow. If there is none, it should redirect the user back to the Home Page with an error, such as "Invalid Session".

Actual behaviour

The page loads successfully. It displays dummy confirmation text and generates a fake Booking ID without any flight being searched or purchased.

Steps to reproduce

- Open a fresh Incognito browser window with a cleared session.
- Do not go to the Home Page
- Directly paste the confirmation URL: <https://blazedemo.com/confirmation.php>
- Press Enter.

Environment

- Windows 11
- Chrome Version 148

Other information

- Priority: High
- Severity: Critical

Generated at Sat Jun 13 14:27:36 UTC 2026 by Harsh Choudhary using Jira 1001.0.0-SNAPSHOT#100291.rev1c7e4733e5b961216b8b0a12338994ae0045171.

A screenshot of a web browser window. The address bar shows 'blazedemo.com/confirmation.php'. The page has a dark header with the text 'Travel The World home'. The main content area has a large heading 'Thank you for your purchase today!'. Below this is a table with transaction details: Id (1781453766293), Status (PendingCapture), Amount (555 USD), Card Number (xxxxxxxxxxxx1111), Expiration (11 /2018), Auth Code (888888), and Date (Sun, 14 Jun 2026 16:16:06 +0000). At the bottom, there is a JSON object representing the transaction data.
